

2.G.A.3 Describing 1 as a Fraction (Part 2)

2.G.A.3: Describe the whole as two halves, three thirds, four fourths.

A fraction for one whole has the same number on top and the bottom. There are three equal parts in the whole. Each part is $\frac{1}{3}$ of the whole. So, the fraction equivalent to the whole is $\frac{3}{3}$.

Count the parts in the whole. Choose the fraction for the whole.

$$\frac{3}{3}$$

$$\frac{2}{5}$$

$$\frac{1}{3}$$

$$\frac{2}{2}$$

$$\frac{1}{2}$$

$$\frac{4}{4}$$

$$\frac{2}{2}$$

$$\frac{3}{4}$$

$$\frac{3}{3}$$

$$\frac{4}{4}$$

$$\frac{1}{4}$$

$$\frac{2}{2}$$

2.G.A.3 Describing 1 as a Fraction (Part 2)

Answer Key

2.G.A.3: Describe the whole as two halves, three thirds, four fourths.

A fraction for one whole has the same number on top and the bottom. There are three equal parts in the whole. Each part is $\frac{1}{3}$ of the whole. So, the fraction equivalent to the whole is $\frac{3}{3}$.

Count the parts in the whole. Choose the fraction for the whole.

$$\frac{3}{3}$$

$$\frac{2}{5}$$

$$\frac{1}{3}$$

$$\frac{2}{2}$$

$$\frac{1}{2}$$

$$\frac{4}{4}$$

$$\frac{2}{2}$$

$$\frac{3}{4}$$

$$\frac{3}{3}$$

$$\frac{4}{4}$$

$$\frac{1}{4}$$

$$\frac{2}{2}$$
