## 4.G.A. 2 Names of 2D Figures

4.G.A.2: Classify two-dimensional figures based on the presence or absence of parallel or perpendicular lines, or the presence or absence of angles of a specified size. Recognize right triangles as a category, and identify right triangles.

Give what is asked in each item and then write your answers on the space provided.

1. Which of the figures shown below are polygons?
a.

b.

c.

d.

e.

Answer:
2. Give the names of these polygons.
a.

b.

c.

d.

Answer:
a.
c.
b. $\qquad$ d. $\qquad$
3. Which of these is a regular polygon?
a.

b.

c.

Answer:
4. Draw the following polygons based on the given description.
a. a regular heptagon
b. an irregular triangle
c. a regular octagon

## Answer:

a.
b.
c.
5. Pick the odd one out.
a.

b.

c. $\square$
d.

## Answer:

6. What do you call a polygon whose all sides have the same length?

Answer:

## 4.G.A. 2 Names of 2D Figures

## Answer Key

4.G.A.2: Classify two-dimensional figures based on the presence or absence of parallel or perpendicular lines, or the presence or absence of angles of a specified size. Recognize right triangles as a category, and identify right triangles.

Give what is asked in each item and then write your answers on the space provided.

1. Which of the figures shown below are polygons?
a.

b.

c.

d.

e. $\square$
Answer:
b, d, e
2. Give the names of these polygons.
a.

b.

c.

d.

Answer:
a. _triangle
c. heptagon
b. hexagon
d. decagon
3. Which of these is a regular polygon?
a.

b.

c.

Answer:
c
4. Draw the following polygons based on the given description.
a. a regular heptagon
b. an irregular triangle
c. a regular octagon

Answer:
a.

b.

c.

5. Pick the odd one out.
a.

b.

c.

d.

Answer:
b
6. What do you call a polygon whose all sides have the same length?

## Answer: <br> regular polygon
